

ABSTRACT OF THE DISCLOSURE:

POST FOAMING COMPOSITIONS

5 A post foaming composition which comprises an aqueous medium which includes therein:

- i) at least one primary surfactant;
- ii) at least one rheology modifying agent which
 provides the aqueous medium with a yield
10 value; and
- iii) a biliquid foam which comprises an aqueous
 medium as the continuous phase and a
 water-insoluble liquid having a boiling
 point in the range of from 25 to 72°C as
15 the internal phase;

wherein the water-insoluble liquid which is incorporated into the biliquid foam as the internal phase is chosen so that, in use, the said liquid vaporises and either
spontaneously causes the composition to foam or, when the
20 composition is applied to a surface and rubbed, causes the composition to foam.
